

TERRASMART WET POUR RUBBER CRUMB SURFACING SYSTEM

Lightweight raised flooring system with a durable rubber crumb finish for roof terraces and podiums.

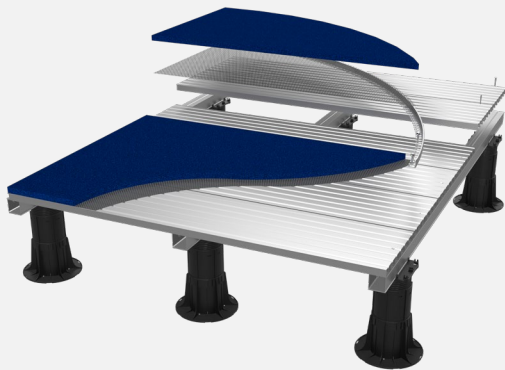

OVERVIEW

The TerraSmart Wet Pour Rubber Crumb system is a lightweight, raised surface solution ideal for roof terraces and elevated play areas. Certified to Broof(t4) fire classification, it provides a safer, slip-resistant alternative to traditional paving or decking. With options to suit applications requiring fall-safe performance, the system combines versatility with durability, allowing for creative design flexibility with a wide range of colours.

- BROOF(t4) Certified
- Slip-resistance surface, suitable for play areas
- Range of 22 colour options for design flexibility
- Fully integrated raised system
- Complies with BS EN 1177 & BS 7188 for playground safety
- Durable, low-maintenance surfacing

STANDARD

The Standard variant of the system is for use when there is no requirement for a fall safe base layer. This is quick to install and perfect for a general amenity space without children's play equipment. RYNO® can assist with an assessment of suitability – let's discuss.

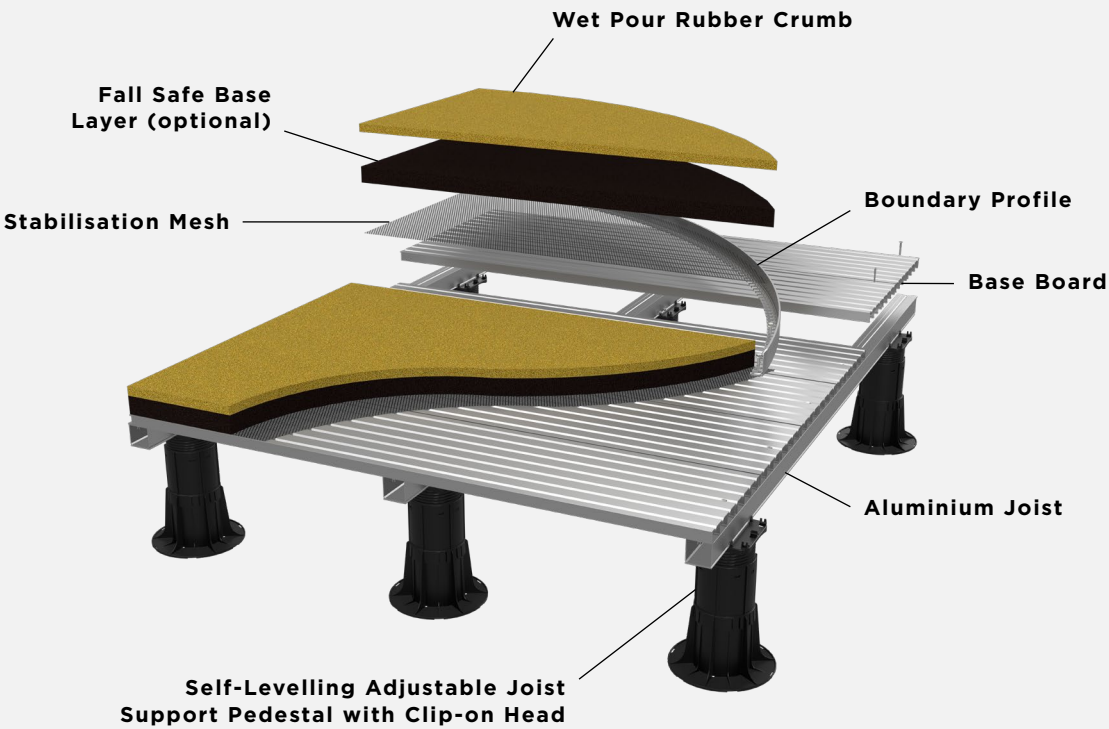

- Wide range of colours available
- Rapid installation
- Super slip resistant

FALL SAFE

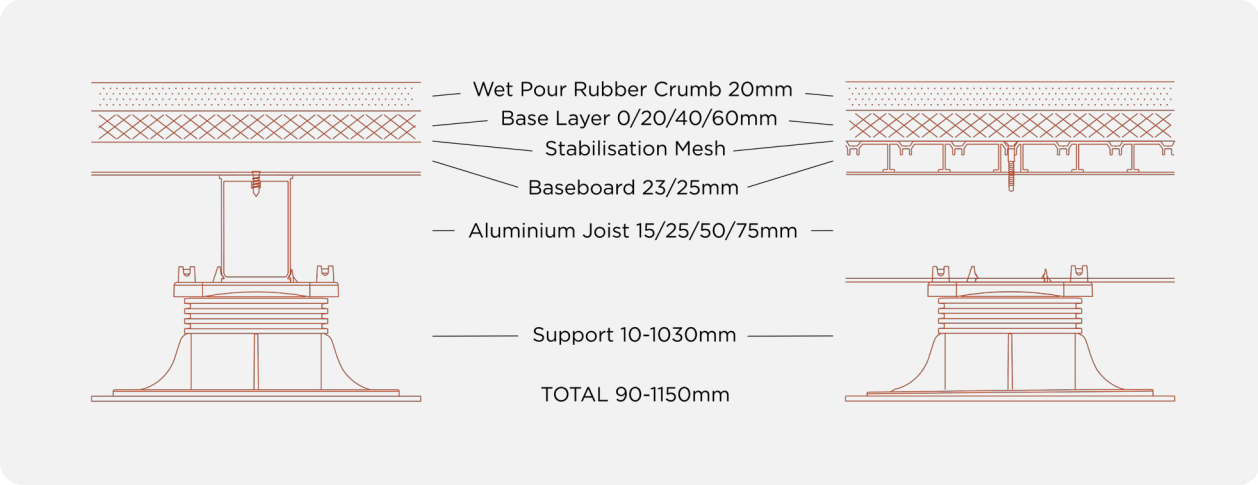

The Standard variant of the system is for use when there is no requirement for a fall safe base layer. This is quick to install and perfect for a general amenity space without children's play equipment. RYNO® can assist with an assessment of suitability – let's discuss.

- Wide range of colours available
- Fall safe cushioning base layer included
- Super slip resistant
